Ways to Style Components

In Next.js: _app.js

Load a CSS file in the HTML root document

Apply a CSS file on the component level

Use the style attribute on a component
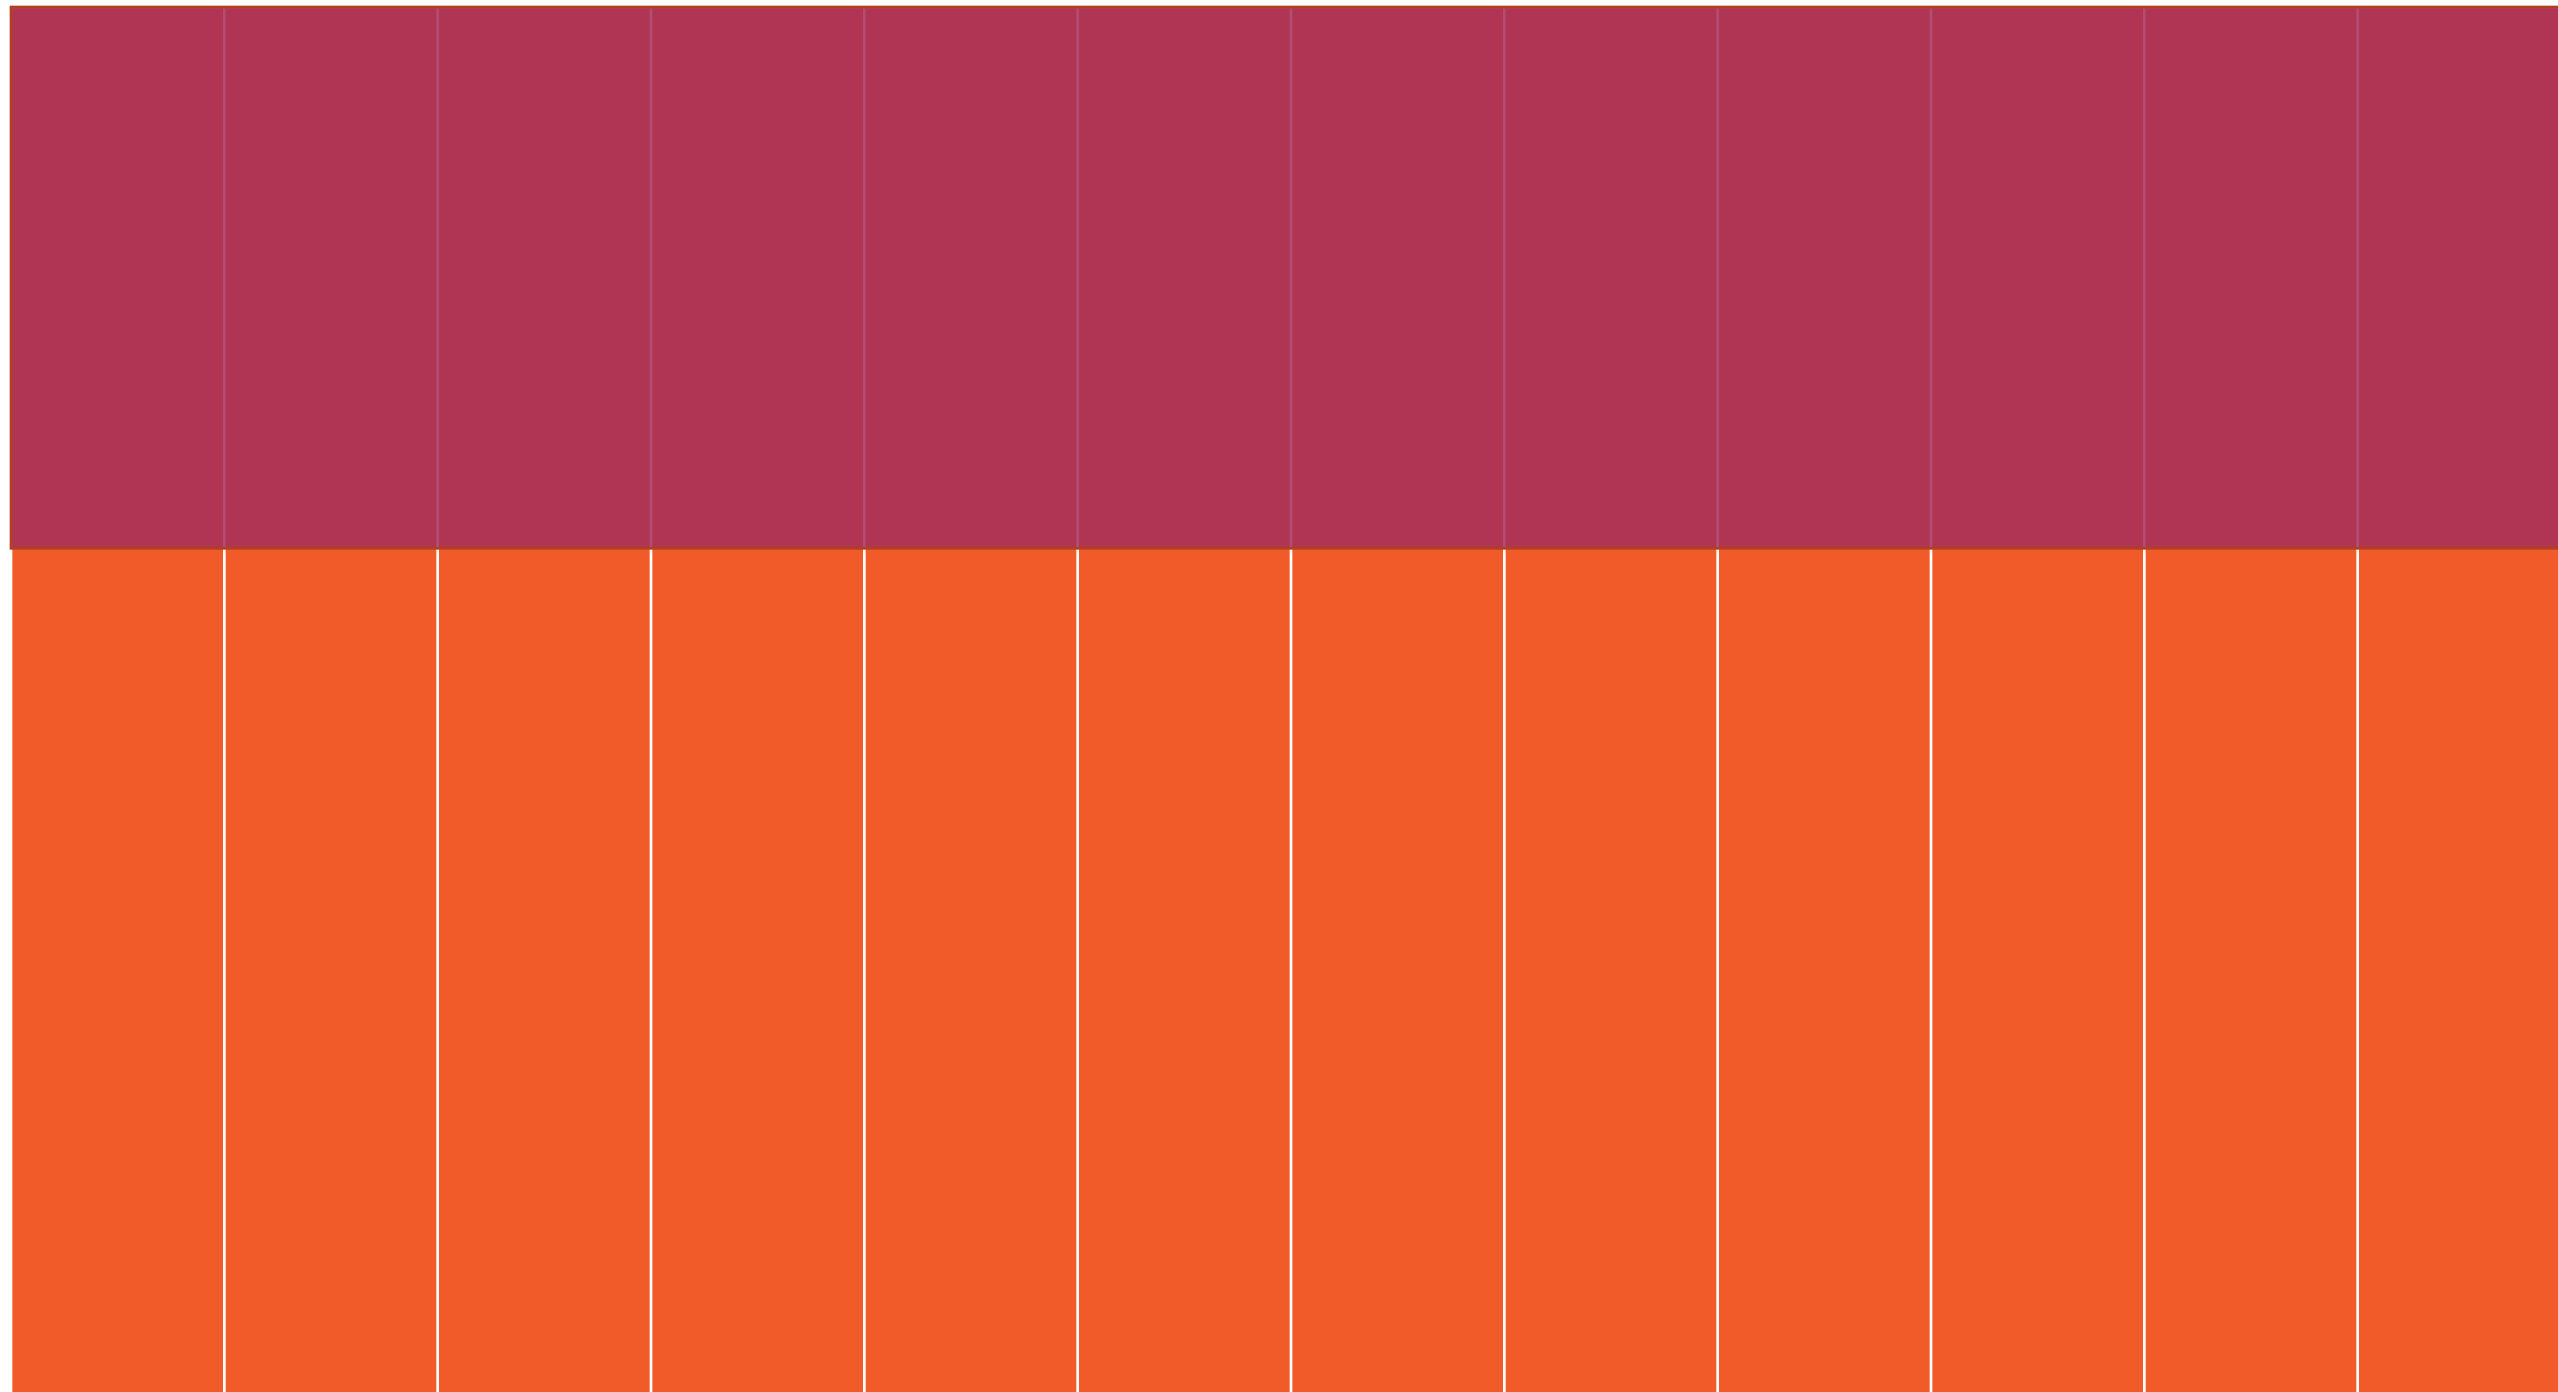

In the Demo Application
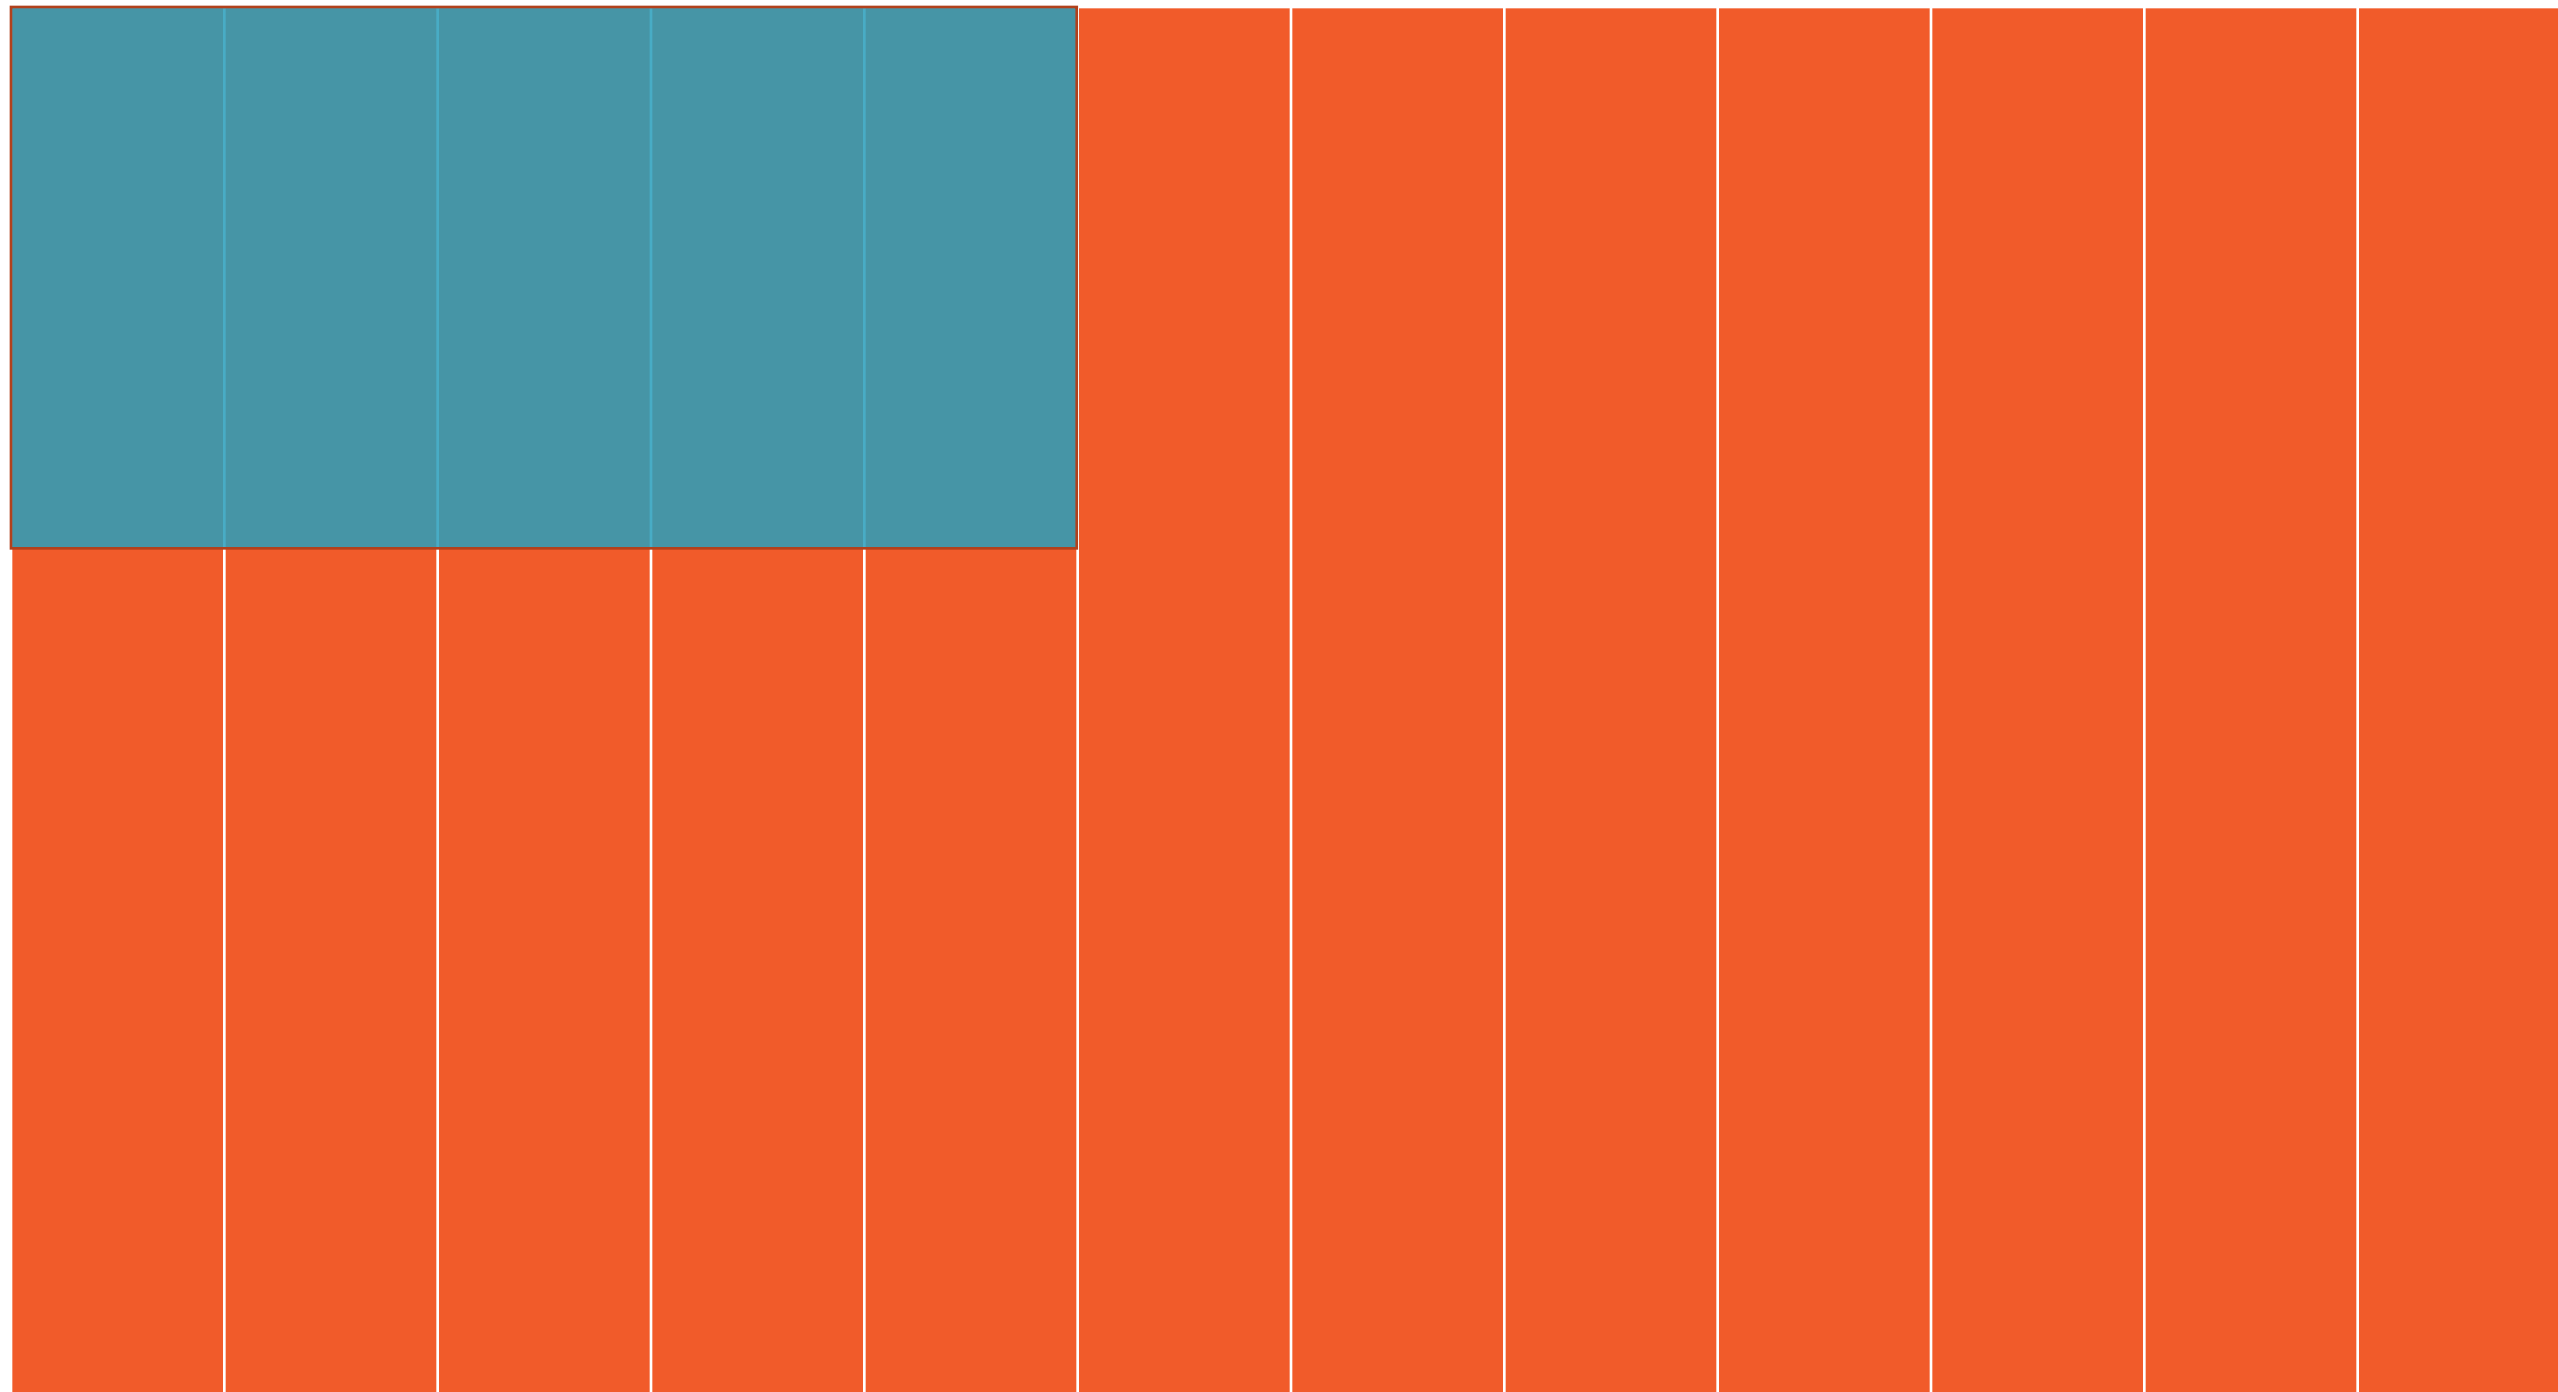

Bootstrap

Typical place to load: index.html
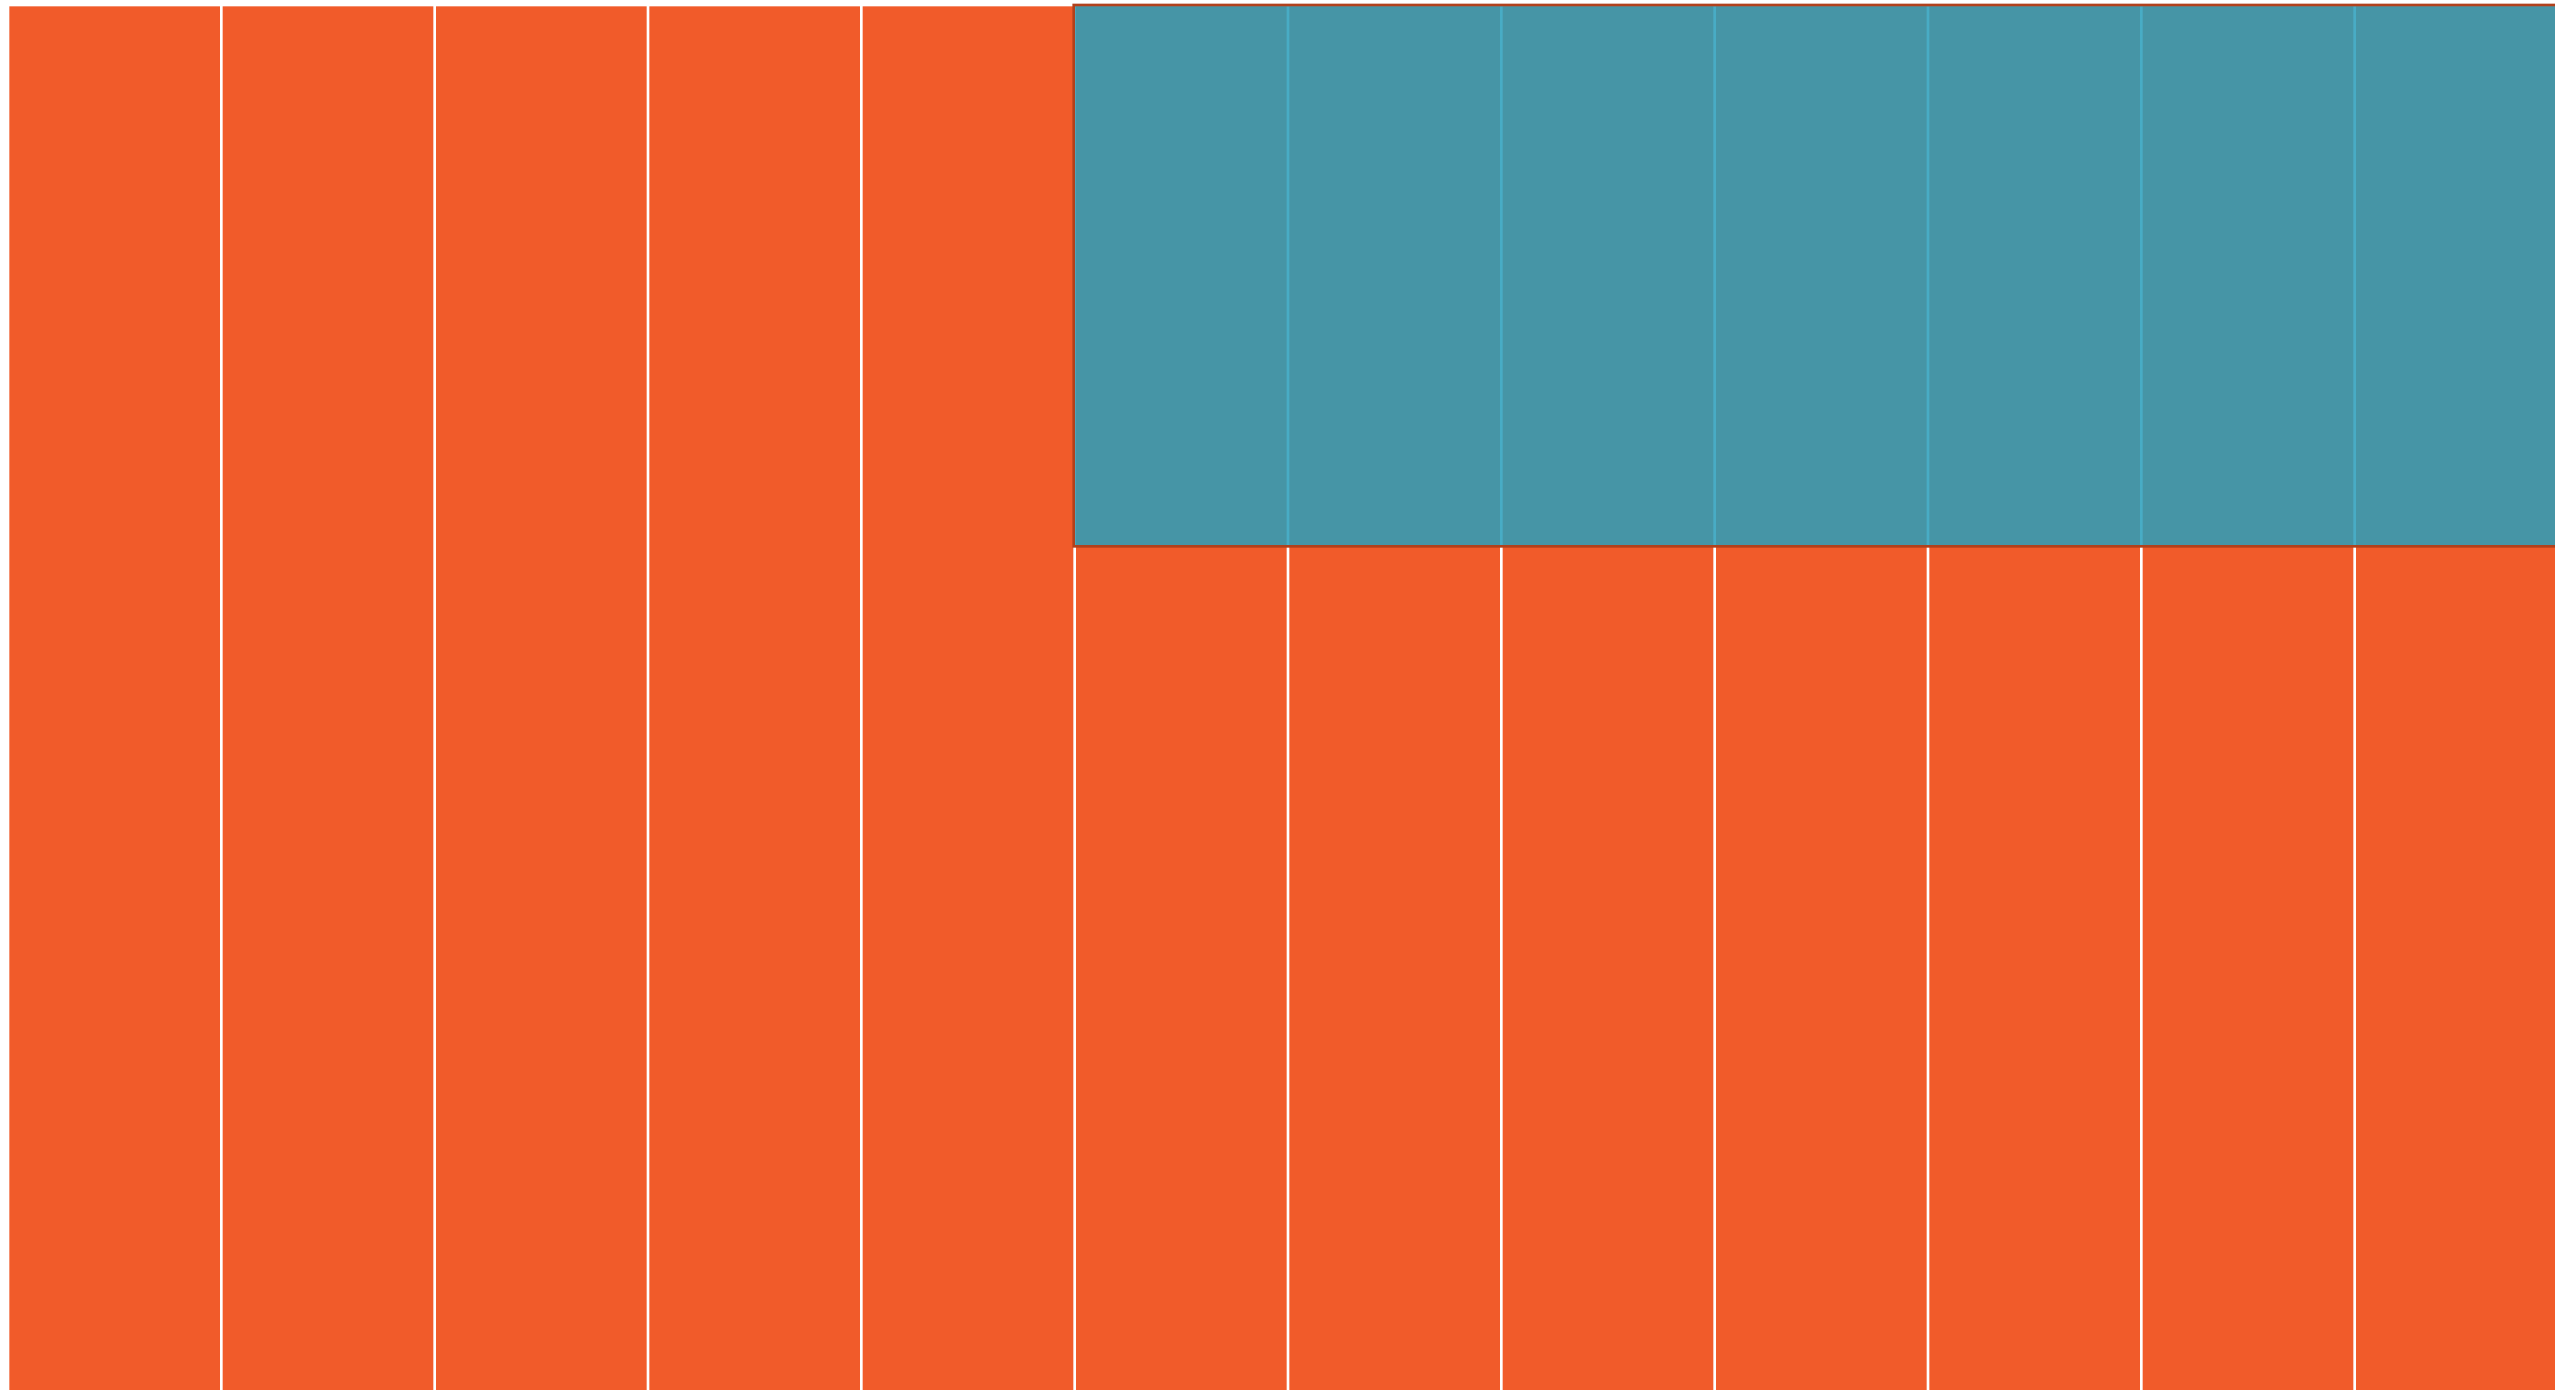

Next.js: not directly accessible

The Bootstrap Grid System

The Bootstrap Grid System

The Bootstrap Grid System

CSS Modules

Import CSS file in a component

CSS only available in the component

Not a React feature

Can help with organizing classes

Avoid scoping issues

Bundled

Class names automatically renamed

The Style Attribute

Can be used with components

Takes an object containing the CSS

Inline or pre-declared object

The Style Attribute

Discouraged

Use CSS files instead:

Separation

Performance
